· What is Juliet Feminine Laser? ·

Different stages of a woman's life are accompanied by unavoidable experiences with regards to intimacy and sexuality. Childbirth and menopause are just two examples of events that impact the vaginal environment and result in itching, dryness, laxity and painful intercourse. Juliet is a laser that treats women's intimate diseases and is an effective addition to, or alternative, to hormone therapy or surgery. The goal is to restore the original metabolism of connective tissue and improve the state of the mucosa, by stimulating a process of neocollagenesis. This leads to a restoration and a return to the natural PH of the mucosal structure, increasing its flexibility.

· Who is Juliet right for? ·

Juliet is a suitable treatment for women of all ages but is particularly effective for those who: have given birth, are going or have gone through menopause, have undergone chemotherapy or surgery, want to fight or prevent pelvic floor diseases, and want to improve the quality of their sex life.

· How does the Juliet work? ·

Juliet is a laser that gently rejuvenates the vaginal connective tissue and stimulates collagen production in both layers of the vaginal walls (mucosa and submucosa layers). This improves elasticity and lubrication and ultimately, strengthens and tightens the vaginal tissue. This "remodeling" of the vaginal walls by Juliet translates into a reduction of symptoms after the first treatment.

· How many treatment sessions will I need? ·

The number of treatments needed depends on each patient, however, with Juliet most women report seeing results after one session and needing fewer subsequent treatments for optimal outcomes. We recommend Juliet be used to PREVENT vaginal deterioration, to CORRECT vaginal issues, and to MAINTAIN optimal vaginal health.
