You aren't the only one bothered by cellulite; 85% of women have cellulite. Cellulite isn't a fat problem, it's a structural problem beneath the skin.

Cellulaze is the only FDA cleared minimally invasive one time laser treatment for cellulite with proven results up to 3 years. Cellulaze has been clinically studied to deliver long term results with people just like you. Cellulaze delivers laser energy below the skin. Unlike topicals or devices that only touch the skin, Cellulaze treats the problems below the skin that cause the bumps, dimples and valleys that you want treated.

### How does it work?

The laser will melt fat, and deliver laser energy to release the bands under the skin and promote collagen production. Increasing collagen has been shown to result in improved skin thickness and elasticity.

### What results can I expect?

You'll see some improvement right away with optimal results apparent between 3–6 months. However, it is important to maintain a healthy diet and exercise regimen.

Treatment plans can be adjusted to fit everyone's lifestyle – speak to your provider regarding desired downtime, comfort, and results.\*

\*Individual results may vary and are not guaranteed.
